Hawker Brownlow Education  
Highett, Victoria, Australia

### **The Science File**

The Science File introduces students to the skills of science with thorough, and thoroughly fun activities. It encourages students to think and engage with the scientific method.

The Science File is about important ways of thinking scientifically incorporating some unique thinking tools. Covering areas such as hypotheses, variables, experimental design, using analogies, logical thinking, The Science File is a great resource for teachers in the Middle Years. The Science File is soundly based on the precepts of a thinking curriculum and this session will cover

- \* the rationale behind The Science File
- \* an outline of the program
- \* an introduction to using the thinking tools

This session will provide insight into a great resource and hand-on activities you can use with your students in your next class.
