ASTA Education & Project team  
Deakin, ACT, Australia

**The Australian Schools Innovation in Science, Technology and Mathematics (ASISTM) Project**

Since 2002 ASTA has been developing and trialing a model that provides tools and resources for teachers to teach science through engaging projects. These projects take a science-based issue that is relevant to your students, school and community. They gather together other schools and community and industry groups. They provide a means to link science with maths and technology and other learning areas too. All involved learn new skills, teaching methods and produce outcomes that put science into action and a meaningful context. These are just the sort of projects that ASISTM provides funds for.
