New Directions in Professional Development : Online Master of Contemporary Science

The Faculty of Science at The Australian National University offers the innovative Master of Contemporary Science degree program. This online program is designed explicitly for practising science teachers and is focused on updating and broadening your science content knowledge base.

The latest methods of online learning are applied to help bring you up-to-date with the forefronts of science. The program is rigorous, supportive and designed to be a form of professional development that will really make a difference to your teaching. This workshop will enable you to sample the online offerings and let you explore adult learning in this flexible format. You will be able to experience the latest discoveries in genomics, astrophysics, conservation biology, pharmaceutical chemistry, optical fibre communications and more.

Block: 2C

Participant Limit: None
